INFLUENZA TESTING AT THE STATE HYGIENIC LABORATORY

Cumulative Influenza Viruses Detected by SHL by Age Group (10/3/2021 - Current Week)

	A not subtyped	A H1N1 pdm09	A H3		B not subtyped	B Vic	B Yam	
0-4	0	3	6	9	0	0	0	0
5-17	3	4	13	20	0	0	0	0
18-24	0	4	6	10	0	0	0	0

Unknown	0	0	0	0	0	0	0	0
Total	4	16	36	56	0	0	0	0

Table Note: Cell counts of three or less are sometimes suppressed to protect confidentiality. Totals by age may not add up to totals by subtype/lineage due to missing age information. Only cases of Iowa residents are included. Specimens listed as “not subtyped” may be pending or were not able to be subtyped due to weak positive lab results. This can be due to poor collection, timing of collection or stage of infection.

Influenza Viruses Detected by SHL by Week (10/3/21 - Current Month)

■ A not subtyped
 ■ B not subtyped
 ■ A H1N1 pdm09
 ■ A H3
 ■ B Vic
 ■ B Yam

Graph Note: Only viruses that have been assigned a subtype or lineage are shown.

SHL Flu Testing Note: The State Hygienic Laboratory (SHL) is the primary laboratory in Iowa characterizing specimens for influenza surveillance. SHL reports the number of tests performed and the type and subtype/lineage of positive tests to the influenza surveillance network daily. SHL also sends a portion of specimens to CDC for further characterization.

ILI by Season

ILI by Age Group Current Week

MMWR Week	End Date	Age 0-4	Age 5-24	Age 25-49	Age 50-64	Age 65 and older	Total ILI	ILI Pct
46	11/19/2022	41	74	22	6	10	153	3.34%

Outpatient ILI Note: Outpatient health care providers who participate in the ILineNet (a national influenza surveillance program) report the number of patients seen with influenza-like illness and the total number of patient visits each week. The ILI Definition changed in 2021-22 so that persons with ILI symptoms (cough, sore throat, fever) will be counted even if positive for other respiratory illness (e.g., COVID-19) which makes comparison across seasons difficult.
